

## Welcome to the second issue of VACCINE – the CCI Newsletter!

The last six months have seen the CCI partners continue to work on our four CCI focus areas:

Predictive policing

Community policing

Crime Prevention through Urban Design and Planning (CP-UDP)

Measuring and mitigating citizens' feelings of insecurity

CCI partner law enforcement agencies (LEAs) have been working continuously with partners and stakeholders undertaking research in the above focus areas. They have then developed coherent descriptions of the issues and challenges they found in the form of 'problem statements'. These were further explored with the rest of the Consortium at a series of DesignLabs held in September in Salford, UK. During the DesignLabs, partners explored the problem statements and generated various ideas and concepts. LEAs will now undertake further research in relation to these concept areas to support development of the toolkits that will be demonstrated later in the project.

In our first newsletter, we mentioned that CCI Partners were developing reports on the 'state-of-the-art' in each focus area. From these reports, and with further research, the University of Groningen (RUG) have produced detailed reviews on the ethical, legal and social issues impacting the four CCI focus areas.

Consortium partner, Efus has taken the initiative to publish 'factsheets' based on the CCI state-of-the-art reports, to support their dissemination. The factsheets have been translated into a number of different languages.

You can find these factsheets and more about the CCI project by visiting our website [www.cuttingcrimeimpact.eu](http://www.cuttingcrimeimpact.eu). We hope you enjoy reading this newsletter and continue to follow CCI on our journey throughout the project.

*The CCI Consortium*

## About the Cutting Crime Impact (CCI) Project

The CCI project addresses high impact 'petty crime.' This is defined as non-organised crime taking place against people or property in towns and cities. This type of crime has a significant negative impact on European citizens' quality of life, community cohesion and the safety and security of the urban environment. Those living in deprived neighbourhoods and vulnerable groups are often the most seriously affected.

The CCI project seeks to support Law Enforcement Agencies (LEAs) and security policymakers in adopting a preventative, evidence-based and sustainable approach to tackling high-impact petty crime.

## News

### CCI DesignLabs - From design research to design concepts

25 members of the CCI project consortium met in Salford, UK from 24 to 26 September 2019 to take part in the first three DesignLabs – an intense design analysis and ideation process. The DesignLabs explored three of the four project focus areas that CCI LEAs have been researching.

### CCI Factsheets

CCI Project has created 4 factsheets for each of the project focus areas.

They are now available for download [HERE](#) →

### Opportunity to collaborate with the CCI Project

The Design Against Crime Solution Centre has an exciting opportunity for an experienced design researcher to deliver University of Salford (USAL) CCI project tasks, collaborate with consortium partners and support delivery of the CCI project.

## Experiences in Requirements Capture Research within the CCI Project - Landeskriminalamt Niedersachsen (LKA) in Lower Saxony

**Author: Maximilian Querbach, Researcher, Landeskriminalamt Niedersachsen (LKA)**

Maximilian Querbach, is a researcher at LKA, he led on the requirements capture research for the DesignLab around Predictive Policing. Below he gives an account of his experience in doing this:

In order to determine the necessary requirements for the development of a predictive policing toolkit, an open research approach in the form of participatory observations in police patrol service was chosen. My attitude towards this very open approach was initially very sceptical, as I didn't know what the end result would be. In addition the actual result was not obvious to me at first...

## Widening the Network: Co-operation with the Institute of Regional and Metropolitan Studies of Barcelona

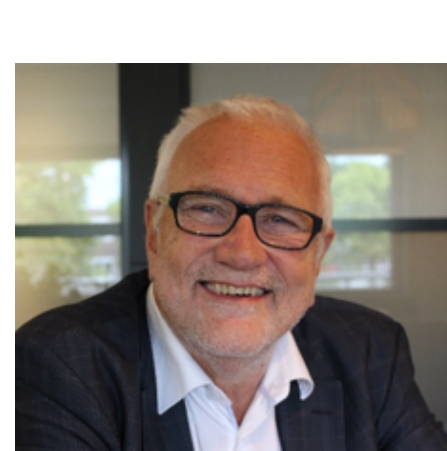

**Author: Francesc Guillén Lasierra, Departament d'Interior (INT)**

CCI is already a very comprehensive project. There are universities, LEAs, Prevention Forums and organisations. The project promotes and sustains an integral concept of security, taking into account not only crime, but also disorder, urban design and security perceptions. Despite of the size of the project it has an open vocation to look for any interesting experience for the project aims, no matter whether it comes from outside of the project...

## Prevention and management of crime risks in publicly accessible urban environments -and further worldwide standardisation of CP-UDP

**Author: Paul van Soomeren, Founder of DSP- Groep (DSP)**

Did you know that millions of businesses and organisations are applying and using European standards every day? The more you know about standards, the more you will recognise the benefits of them.

Standards make our lives safer, simpler, more comfortable and more efficient. But standards only work when they are properly used. Do you want to make sure that your child's toys are safe? Then watch out for the EN71 series of standards on toy safety. Do you care about risk management? That's where the standard EN ISO 31000 for risk management comes in...

## CCI contributes to other projects!

### The PRoTECT project

The PRoTECT (Public Resilience using Technology to Counter Terrorism) project aims to strengthen local authorities' capabilities in public spaces protection by putting in place an overarching concept where tools, technology, training and field demonstrations will lead to situational awareness and improve direct responses to secure public places before, during and after a terrorist threat...
